SWEPCO
350

Engine Assembly and Break-In Oil

SWEPCO 350 Engine Assembly and Break-In Oil is designed to provide superior protection and performance during those first critical miles of a new or rebuilt engine. Those first few miles are where the rings, bearings, and seals settle into place. SWEPCO 350 Engine Assembly and Break-In Oil contains higher zinc and phosphorous content to protect rubbing surfaces such as rings and cylinder walls, valve trains and crank case components.

Engine builders have had increased concerns about modern engine oils ability to protect new and rebuilt engine parts during initial startup. Especially the flat-tappet cams, lifters and cylinder walls. Current engine oils have reduced anti-wear additives and added friction modifiers in an attempt to increase gas mileage in new vehicles.

Works to protect new parts during the initial run-in period so that the rings seat quickly to provide maximum compression. New camshafts and lifters usually are not seasoned, or heat cycled so they are susceptible to excessive wear during the break-in period. SWEPCO 350 contains extra zinc and phosphorous to provide superior anti-wear properties. SWEPCO 350 promotes extra film strength to increase torque and horsepower while reducing metal to metal contact.

KEY BENEFITS

- Fast and efficient ring seal
- Higher levels of zinc and phosphorous for maximum protection
- Compatible with Methanol and high-octane racing fuel
- Recommended for use with flat-tappet camshafts
- Does not require additional additives
- Up to 40 horse power increase

PERFORMANCE

Properties:

SAE GRADE.....	10
Viscosity at 40°C cST.....	36.82
Viscosity at 100°C cSt.....	6.25
Viscosity Index.....	119
LBS / Gallon.....	7.10
Specific Gravity.....	0.8573 g/ml
Pour Point F.....	-40
Pour Point C.....	-40
Flash Point F.....	405
Flash Point C.....	207
